

Here are **50 SQLite practical questions** based on the **Chinook database** you provided. They are grouped into **Basic (1–20)**, **Intermediate (21–35)**, and **Advanced (36–50)**.

Basic Level (1–20)

1. Display all records from the artists table.
2. Show only the Name column from the genres table.
3. List all customers' first and last names.
4. Find all albums with their titles.
5. Display all tracks with their unit price.
6. Show all invoices where the total amount is greater than 10.
7. List customers who live in the USA.
8. Count the total number of tracks in the tracks table.
9. Find the maximum unit price of a track.
10. Find the minimum invoice total.
11. Show all employees' names and titles.
12. Display distinct billing countries from the invoices table.
13. Find all tracks longer than 5 minutes (Milliseconds).
14. Show albums sorted alphabetically by title.
15. List customers sorted by last name in descending order.
16. Count how many genres are available.
17. Show tracks with unit price between 0.99 and 1.99.
18. Display customers whose city starts with letter 'B'.
19. Find total number of invoices.
20. Show all playlist names.

Intermediate Level (21–35)

21. Display track names along with their album titles.
22. List album titles with their artist names.
23. Show customer names along with their support representative (employee name).
24. Display invoice details along with customer names.
25. Show track name, genre name, and media type.

26. Count how many tracks are there in each genre.
 27. Find the total sales (sum of invoice totals) per country.
 28. List the top 5 most expensive tracks.
 29. Show the number of albums created by each artist.
 30. Display customers who have made more than 5 purchases.
 31. Show invoices with total greater than the average invoice total.
 32. Find the total quantity of tracks sold from invoice_items.
 33. Display playlists along with the number of tracks in each playlist.
 34. Show employees who report to another employee.
 35. Find customers who never made any purchase.
-

Advanced Level (36–50)

36. Find the top 5 customers who spent the most money.
 37. Display the most popular genre based on number of tracks sold.
 38. Show artist names whose tracks appear in the most playlists.
 39. Find the longest track in each genre.
 40. Display monthly sales totals from invoices.
 41. Show the employee who supports the highest number of customers.
